```
        private val bridgeDelegate: BridgeDelegate<HotwireDestination>
    ) : BridgeComponent<HotwireDestination>(name, bridgeDelegate) {
»       private val buttonId = 1
        private val fragment: HotwireFragment
            get() = bridgeDelegate.destination.fragment as HotwireFragment

        // ...

        private fun addButton(message: Message) {
            val composeView = ComposeView(fragment.requireContext()).apply {
»               id = buttonId
                setContent {
                    Button(
                        onClick = { replyTo(message.event) }
                    ) {
                        Text("Sign in")
                    }
                }
            }
            // ...
        }
    }
```

Add a private function to remove the button from the toolbar via `findViewById()`, passing in the `id` set previously.

ch08_11/android/app/src/main/java/com/masilotti/hikingjournal/components/ButtonComponent.kt

```
    // ...

    class ButtonComponent(
        name: String,
        private val bridgeDelegate: BridgeDelegate<HotwireDestination>
    ) : BridgeComponent<HotwireDestination>(name, bridgeDelegate) {
        private val buttonId = 1
        private val fragment: HotwireFragment
            get() = bridgeDelegate.destination.fragment as HotwireFragment

        override fun onReceive(message: Message) {
            addButton(message)
        }
```
