Add a Dynamic Image

The names of icons are different on iOS and Android. So, to keep the meaning of these icons consistent, we need a way to uniquely differentiate one from another.

Start by opening `button_controller.js` in the Rails app and update the reference to the iOS icon to distinguish it from an Android one. Then, add a second value for Android.

ch08_18/rails/app/javascript/controllers/bridge/button_controller.js

```
  import { BridgeComponent } from "@hotwired/hotwire-native-bridge"

  export default class extends BridgeComponent {
    static component = "button"

    connect() {
      super.connect()

      const title = this.bridgeElement.bridgeAttribute("title")
»     const imageName = this.bridgeElement.bridgeAttribute("ios-image-name")
»     const iconName = this.bridgeElement.bridgeAttribute("android-icon-name")
»     this.send("connect", {title, imageName, iconName}, () => {
        this.bridgeElement.click()
      })
    }

    disconnect() {
      super.disconnect()

      this.send("disconnect")
    }
  }
```

This lets us use `data-bridge-ios-image-name` to set the iOS image name and `data-bridge-android-icon-name` to set the Android image name. And because you
