

The downloaded zip file contains three fonts, but we only need one. Open the `Material_Symbols_Outlined` folder and rename the `ttf` font file to `material_symbols.ttf`. We'll add this font to our project in Android Studio.

In Android Studio, create a new resource directory for fonts. Right-click the `res` directory on the left and select New -> Android Resource Directory. Select font from the Resource type dropdown and click OK.

Drag and drop the `ttf` font file to this directory. Select Refactor in the dialog for Android Studio to move the file into the project.

OK, back to Kotlin. Pop back open `ButtonComponent`, and let's render an image.
