```
@Serializable
data class MessageData(
    @SerialName("title") val title: String,
    @SerialName("iconName") val iconName: String?
)
```

Then, in the `@Composable`, replace the body of `Button()` with `Text()`. By using the liga font feature, we can render images directly from the font file. Use the `?:` operator to fall back to `Text` when an icon isn't given.
