Add an App to App Store Connect

App Store apps are managed through App Store Connect.[54] You'll use this to upload builds, submit apps, review analytics, and more. To get started, you'll need to join the Apple Developer Program.

Join the Apple Developer Program

Visit the Apple Developer Program[55] landing page and start your enrollment. A heads up that you'll need an Apple account with two-factor authentication enabled to register. Choose between an Individual or Organization account based on the program guidelines.

And yes, the Apple Developer Program costs $99 per year. The good news is that this comes with code-level support,[56] provided directly by developers at Apple. I've used this in the past to ask very specific questions about an app I was building and was pleasantly surprised at the level of feedback I received. It's a great resource for developers new to iOS.

Once you have an account, you can configure the app and its identifier.

Create an App Identifier

Every app has a unique identifier in the App Store. To get yours on TestFlight, you need to first register an app identifier with Apple.

To create an app identifier, sign in to the Apple Developer[57] portal and click the Account button in the upper right. I recommend bookmarking this page—it has a few handy links you'll continue to come back to as you launch iOS apps in the App Store.

Then, from the Certificates, IDs & Profiles section, click Identifiers, as shown in the first screenshot.
