On the next screen, click the blue plus sign next to Identifiers. Make sure App IDs is selected, and click Continue. Ensure that App is selected, and click Continue again.

Fill in the Description field with something to remember the identifier by. Don’t stress about this descriptor; it’s never shown externally. I usually set it to the name of my app plus “app identifier.” Then, populate Bundle ID with the *bundle identifier* of the app. Click Continue and then Register.
