Configure a New App

Start by visiting App Store Connect[58] and clicking the big blue Apps button (if you aren't automatically redirected). If you don't want to remember another URL, this is linked from the Apple Developer portal I mentioned bookmarking earlier.

Next, click the blue plus button next to Apps at the top. Select New App from the dropdown.

On the next screen, shown, populate the fields with the following and click Create. Like before, make sure to update Bundle ID if you changed yours.

- *Platforms*: iOS
- *Name*: Hiking Journal
- *Primary Language*: English (U.S.)
- *Bundle ID*: Hiking Journal—com.masilotti.HikingJournal
- *SKU*: com.masilotti.HikingJournal
- *User Access*: Full Access
