

After signing in, select the team from the Team dropdown that replaced the Add Account… button, as shown in the second screenshot.

The checkbox labeled “Automatically manage signing” will do all the hard work of downloading and signing certificates and provisioning profiles for you. I highly recommend you let Xcode do this for you.

Archive the app again via Product → Archive from the Menu Bar. It works this time!

The Archives window will pop up, listing all the archives you’ve made of this app. For now, there’s only one in there. Select it and click Distribute App on the right. On the next screen, select App Store Connect and then click Distribute, as shown in the first screenshot.
