Add yourself to this internal testing group by clicking the blue plus sign next to Testers (0). Click the checkbox next to your account and click Add.

Note the Invited flag under the STATUS column. Invited testers receive an email from Apple that must be confirmed before they can download your app.

How to Add More Testers

All internal testers need to first be App Store Connect users with access to your app. Add a new user from the Users and Access tab at the top of App Store Connect. They will then appear in the previous dialog. More information, including some limitations, can be found in the documentation.[63]
