```
»                   // NOTE: Your IP address will be different.
»                   value = "\"http://192.168.50.139:3000\""
»               )
                isMinifyEnabled = false
                proguardFiles(
                    getDefaultProguardFile("proguard-android-optimize.txt"),
                    "proguard-rules.pro"
                )
            }
        }

        // ...
    }

    // ...
```

Then, toward the bottom of the file, enable the build config feature in the `buildFeatures` section.

ch09_07/android/app/build.gradle.kts

```
    // ...

    android {
        // ...

        buildFeatures {
            compose = true
»           buildConfig = true
        }
    }

    // ...
```

Sync Gradle and rebuild the project via Build → Rebuild project.

Use the new, dynamic URL by opening `MainActivity` and replacing the value of `baseURL` with the version from the build config.

ch09_08/android/app/src/main/java/com/masilotti/hikingjournal/activities/MainActivity.kt
