

Drag and drop the signed bundle into the App bundles area in the middle of the form. This will take a minute or two to upload and validate. While you wait for that, enter a release name. I used “1 (1.0)” since this is the first build for version 1.0 of the app. When validation completes, click Next in the bottom right.

Manifest Conflicts Error

If you’re seeing the following error message, then you’ll need to change your bundle identifier to avoid conflicts with my app. Do this by changing `applicationId` in the app’s `build.gradle.kts`.

Remove conflicts from the manifest before uploading. The following content provider authorities are in use by other developers: com.masilotti.hikingjournal.androidx-startup, com.masilotti.hikingjournal.com.pairip.licensecheck.LicenseContentProvider, com.masilotti.hikingjournal.hotwire.fileprovider.
You need to use a different package name because "com.masilotti.hikingjournal" already exists in Google Play.

On the next screen, click Save and publish. Note that this button will only be active once Google verifies your developer account.
