

This final chapter combines everything you've learned throughout the book so far. You'll create an authenticated Rails endpoint, build bridge components, and write native code. If you get stuck, just take your time. Or take a quick break. Try not to get discouraged. Remember, you can always double-check your work by looking at the reference code for each checkpoint.

Before we dive into any code, it's important to understand the fundamental infrastructure of push notifications. Luckily, both platforms work in a similar way, so we can talk about them in general terms.
