

When the key generates, click Download to save a copy to your machine. Note that you won't be able to download this again after navigating away from the page. Store it somewhere safe!

Enable push notifications for your App Identifier by clicking Identifiers on the left and then selecting your identifier from the list. Scroll down and check the box next to Push Notifications and then click Save.

Back in your terminal, edit your development credentials by running the following command from the `rails` directory:

```
bin/rails credentials:edit --environment development
```

Add a top-level `ios:` key with four fields to reflect what we added to `NewLikeNotifier`:

- `bundle_identifier`—`com.masilotti.HikingJournal`, updated to your bundle identifier
- `key_id`—found on the confirmation page when the key is created
