```
import HotwireNative
import UIKit

@main
class AppDelegate: UIResponder, UIApplicationDelegate {
    func application(
        _ application: UIApplication,
        didFinishLaunchingWithOptions launchOptions:
        [UIApplication.LaunchOptionsKey: Any]?
    ) -> Bool {
        Hotwire.loadPathConfiguration(from: [
            .server(baseURL.appending(path: "configurations/ios_v1.json"))
        ])

        Hotwire.registerBridgeComponents([
            ButtonComponent.self,
»           NotificationTokenComponent.self
        ])

        return true
    }
}
```

iOS informs developers when a token is available by calling a special function. Implement that in `AppDelegate` like so:

ch10_27/ios/App/Delegates/AppDelegate.swift

```
import HotwireNative
import UIKit

@main
class AppDelegate: UIResponder, UIApplicationDelegate {
    func application(
        _ application: UIApplication,
        didFinishLaunchingWithOptions launchOptions:
        [UIApplication.LaunchOptionsKey: Any]?
    ) -> Bool {
        // ...
    }

»   func application(
»       _ application: UIApplication,
```
