We need to enable the Push Notification capability for our app before APNs will provide a notification token.

Configure Entitlements for Push Notifications

Click the HikingJournal project from the Project Navigator on the left, select HikingJournal from the TARGETS (not PROJECT) in the middle column, then select the Signing & Capabilities tab at the top.

Click the Add Capability button in the middle of the screen, titled “+ Capability”.

In the dialog that appears, start typing “push” to filter the list and double-click Push Notifications when it appears.
