

Open the notification by clicking it in the simulator. The app will open to the home screen. Not very helpful, is it? Up next, you'll open the screen encoded in the `path` parameter of the notification.

Route iOS Notifications

This final section for iOS takes your push notifications to another level. When the user taps on a notification, the page of the liked hike will appear on the navigation stack.

Start by creating a new file under `Models` named `NotificationRouter.swift`. Create a class that inherits from `NSObject` and implements the
