```
      config.device_tokens = -> {
        recipient.notification_tokens.where(platform: :FCM).pluck(:token)
      }

»     config.json = ->(device_token) {
»       {
»         message: {
»           token: device_token,
»           notification: {
»             title: "Someone liked your hike!"
»           },
»           data: {
»             path: hike_path(params[:hike])
»           }
»         }
»       }
»     }
    end
  end
```

Wrap up this file by configuring the credentials. Don't forget to call `#to_h` to convert this to a hash!

ch10_50/rails/app/notifiers/new_like_notifier.rb

```
  class NewLikeNotifier < ApplicationNotifier
    # ...

    deliver_by :fcm do |config|
»     config.credentials = Rails.application.credentials.fcm.to_h

      config.device_tokens = -> {
        recipient.notification_tokens.where(platform: :FCM).pluck(:token)
      }

      config.json = ->(device_token) {
        # ...
      }
    end
  end
```
