the package name to uniquely identify apps in the store. Choose a save location on your machine—I recommend a directory next to the Rails code named `android`. Also, make sure Kotlin is selected for the Language and API 28 (or higher) is selected for the Minimum SDK.

At the time of publication, Android 9 (API 28) runs on approximately 93.4% of devices, as seen in the previous screenshot. That's the minimum requirement for Hotwire Native, so I recommend using that unless you need specific features from a more recent release.

Click Finish to create the app.

When Android Studio finishes downloading and configuring the project, make sure that the Android view is selected from the dropdown in the upper
