⌘- click on activity_main to navigate to the layout file as a reminder of how this was wired up.

Functions in Kotlin

Functions in Kotlin look pretty similar to functions in Swift.

The following function takes two parameters of type Int and returns another Int:

```
fun add(x: Int, y: Int): Int {
    return x + y
}
```

We can call functions in Kotlin via their named parameters or via the order they appear, omitting the names.

```
add(x = 1, y = 2) // Returns 3

add(1, 2) // Returns 3
```

And if the entire function body is a single line of code, we can inline it, just like in Ruby. We're using this shorthand in the navigatorConfigurations() function above.

```
fun add(x: Int, y: Int) = x + y
```

MainActivity is complete! It should now look like the following:

ch01_24/android/app/src/main/java/com/masilotti/hikingjournal/MainActivity.kt

```
package com.masilotti.hikingjournal

import android.os.Bundle
import android.view.View
import androidx.activity.enableEdgeToEdge
import dev.hotwire.navigation.activities.HotwireActivity
import dev.hotwire.navigation.navigator.NavigatorConfiguration
import dev.hotwire.navigation.util.applyDefaultImeWindowInsets

const val baseURL = "http://10.0.2.2:3000"
```
