```
class MainActivity : HotwireActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        enableEdgeToEdge()
        setContentView(R.layout.activity_main)
        findViewById<View>(R.id.main).applyDefaultImeWindowInsets()
    }

    override fun navigatorConfigurations() = listOf(
        NavigatorConfiguration(
            name = "main",
            startLocation = "$baseURL/hikes",
            navigatorHostId = R.id.main
        )
    )
}
```

One last bit of configuration, and then we can finally run the Android app. I know, I'm excited (and a bit impatient), too!

Add Internet Permission

Open `AndroidManifest.xml` by expanding `app` and then `manifests` and double-clicking the file. This manifest outlines the permissions, activities, and configuration of the Android app. We need to add the Internet permission and permit access to non-HTTPS resources.

Add the `android.permission.INTERNET` permission right above the `<application>`. Then add an `android:usesCleartextTraffic` property to the `<application>` node and set it to `"true"`.

ch01_23/android/app/src/main/AndroidManifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:tools="http://schemas.android.com/tools">

»   <uses-permission android:name="android.permission.INTERNET" />

    <application
```
