```
  <!DOCTYPE html>
» <html <%= "data-hotwire-native" if hotwire_native_app? %>>
    <head>
      <%# ... %>
    </head>

    <body>
      <%# ... %>
    </body>
  </html>
```

For Tailwind CSS v4, use `@variant` in `tailwind/application.css` to create the new modifiers.

ch02_10/rails/app/assets/stylesheets/tailwind/application.css

```
  @import "tailwindcss";

» @custom-variant hotwire-native {
»     html[data-hotwire-native] & {
»         @slot
»     }
» }
»
» @custom-variant not-hotwire-native {
»     html:not([data-hotwire-native]) & {
»         @slot
»     }
» }
```

And for Tailwind CSS v3, use `addVariant` in `tailwind.config.js`.

ch02_10/rails/tailwind.config.js

```
  /** @type {import('tailwindcss').Config} */
  module.exports = {
    content: [],
    theme: {
      extend: {},
    },
    plugins: [
»     ({ addVariant }) => {
```
