```
.d-hotwire-native-none {
  display: none !important;
}

» .d-hotwire-native-block {
»   display: block !important;
» }
```

Then add two new buttons to the hike index page: one for signing in and one for signing out. Use the new `d-hotwire-native-block` class to have them hidden on the web but visible in the apps:

ch02_12/rails/app/views/hikes/index.html.erb

```
<%= render "shared/header", title: "Hikes" %>
<%# ... %>

<div class="container d-flex justify-content-between gap-2 mt-4">
  <% if user_signed_in? %>
    <%= link_to "Add a hike", new_hike_path,
      class: "btn btn-primary flex-grow-1 flex-sm-grow-0" %>
»   <%= link_to "Sign out", session_path,
»     class: "btn btn-outline-danger d-none d-hotwire-native-block",
»     data: {
»       turbo_method: "delete",
»       turbo_confirm: "Sign out?"
»     } %>
»  <% else %>
»    <div class="flex-grow-1">
»      <%= link_to "Sign in", new_session_path,
»        class: "btn btn-outline-primary d-none d-hotwire-native-block" %>
»    </div>
  <% end %>
</div>
```

Combining `d-none` with `d-hotwire-native-block` adds the `display: none;` style on the web but overwrites it with `display: block !important;` in the apps. Perfect!
