Keep Users Signed In Between App Launches

Have you noticed that every time you launch the app you have to sign in again? Mobile app users expect to remain signed in even after they close or background an app. Let's fix that.

Check out the `Authentication` concern[24] in the Rails codebase. This module is included in `ApplicationController` to authenticate users. The `#sign_in` method persists the user's ID to an encrypted cookie when they sign in.

ch02_13/rails/app/controllers/concerns/authentication.rb

```
  module Authentication
    extend ActiveSupport::Concern

    included do
      helper_method :current_user, :user_signed_in?
    end

    def sign_in(user)
      Current.user = user
»     cookies.encrypted[:user_id] = user.id
    end

    # ...
  end
```

By default, a cookie set this way in Rails "will be deleted when the user's browser is closed."[25] Every time the app is launched, it is considered "closing" the browser, so we get signed out.

Instead of these ephemeral cookies, we want long-lived ones. We can make the cookie last 20 years (essentially "forever") by using the `permanent` method, like so:

ch02_14/rails/app/controllers/concerns/authentication.rb
