

And you have a fully featured image uploader *completely for free*! No Swift code was required to make this work. All Hotwire Native needed was an HTML `<input>` tag with `type="file"` that accepts images. Rails adds this for us automatically when using the `file_field` helper on an attachment, as shown here:

ch02_15/rails/app/views/hikes/_form.html.erb

```
    <%= form_with model: hike, class: "row g-3 mt-1" do |form| %>
      <%# ... %>

      <div>
        <%= form.label :image, class: "form-label" %>

        <% if hike.image.attached? %>
          <%= image_tag hike.image, class: "img-thumbnail" %>
          <%= form.hidden_field :image, value: hike.image.signed_id %>
        <% end %>

»       <%= form.file_field :image,
»         accept: "image/jpg,image/jpeg,image/png",
»         class: "form-control mt-2" %>
```
