Chapter 3

Navigate Gracefully with Path Configuration

You've built the foundation for your native apps, and you understand how Hotwire Native drives the content directly from the Rails server. Now, let's improve the user experience. The current Hotwire Native integration does enough to function, but it leaves a lot to be desired.

Take, for example, the process of creating a new hike. Launch the app, sign in, and tap "Add a hike" at the bottom. Fill out the form and tap Save to add the hike to the database. A new screen will push onto the stack showing the hike data you entered—flash message included!
