

But try navigating back by tapping “Add a hike” in the upper left. Notice how you see the same filled-out form from before? For a mobile app, that behavior’s quite odd. In this chapter, you’ll address that with Hotwire Native’s *path configuration*.

Specifically, you’ll learn these things:

1. How modals are used in native apps.
2. What path configuration is.
3. How to integrate the apps with remote path configuration.

Let’s get started with modals!
