Import Hotwire Native and set up the path configuration with an empty array in `AppDelegate`.

ch03_06/ios/HikingJournal/AppDelegate.swift

```
» import HotwireNative
  import UIKit

  @main
  class AppDelegate: UIResponder, UIApplicationDelegate {
      func application(
          _ application: UIApplication,
          didFinishLaunchingWithOptions launchOptions:
          [UIApplication.LaunchOptionsKey: Any]?
      ) -> Bool {
»         Hotwire.loadPathConfiguration(from: [
»         ])

          return true
      }
  }
```

Next, tell the `PathConfiguration` where to find the resource on the server.

ch03_07/ios/HikingJournal/AppDelegate.swift

```
  import HotwireNative
  import UIKit

  @main
  class AppDelegate: UIResponder, UIApplicationDelegate {
      func application(
          _ application: UIApplication,
          didFinishLaunchingWithOptions launchOptions:
          [UIApplication.LaunchOptionsKey: Any]?
      ) -> Bool {
          Hotwire.loadPathConfiguration(from: [
»             .server(baseURL.appending(path: "configurations/ios_v1.json"))
          ])

          return true
      }
```
