Chocolate	29	25	18	40	41	25	32	30	38	34	25	28
Non-chocolate	39	39	37	29	30	38	39	10	29	55	29	

41. A home gardener wishes to determine the effects of four fertilizers on the average number of tomatoes produced. Test at 5% level of significance the hypothesis that the fertilizers A, B, C and D have equal average yields.

A	14	10	12	16	17
B	9	11	12	8	10
C	16	15	14	10	18
D	10	11	11	13	8

42. Three processes X, Y and Z are tested to see whether their outputs are equivalent. The following observations on outputs were made.

X	10	13	12	11	10	14	15	13
Y	9	11	10	12	13			
Z	11	10	15	14	12	13		

Carry out the one-way analysis of variance and state your conclusion.

43. A test was given to five students taken at random from XII class of three schools of a town. The individual scores are

School I	9	7	6	5	8
School II	7	4	5	4	5
School III	6	5	6	7	6

Carry out the one-way ANOVA.

44. A farmer applies three types of fertilizers on four separate plots. The figures on yield per acre are tabulated below.

Fertilizer	Plots			
	A	B	C	D
Nitrogen	6	4	8	6
Potash	7	6	6	9
Phosphate	8	5	10	9

Test whether there is any significant difference among mean yields of different plots and among different fertilizers.
