45. What are various information collected under Sample Registration System?
46. If the number of deaths occurred is 980 in a town consisting of 1,50,000 persons during a period, quantify the death rate of the town using suitable formula.
47. Population size of a Hamlet in a hill station during a calendar year was 55,000 and the number of deaths recorded in the Hamlet during the same year was 185. What is the crude death rate of the village?
48. The number of women at reproductive age in a district is 70,000. Also, the number of live births and infant deaths registered in the district are respectively 10,000 and 70. Which mortality rate you will calculate? What is its value?
49. A Primary Health Centre located in a village has a record of 135 live births during a year. The number of deaths recorded in the village was 300. Among them, 5 are new born babies of age less than a year. Measure the infant mortality rate of the village.
50. What is specific death rate? What are its uses?
51. List various uses of Life Table.
52. What are the assumptions made in the construction of Life Table?
53. Population size of a District during a calendar year was 1,25,526. Also, the number of live births registered in the district during the same period was 987. Compute appropriate vital rate using this information.
54. The number of women at child bearing age in a tribal village during a year was 2275 and the number of new born babies of age less than a year in the same village was 23. How will you quantify the birth rate of the village? Find its value.
55. Write a brief note on specific fertility rate.

IV. Give detailed answer to the following questions.

56. What are the importance of Vital Statistics?
57. Calculate crude death rate of a population living in a town from the following data:

Age Group (in years)	0-10	10-20	20-40	40-60	60 and above
No. of Persons	6500	12,000	24,000	20,000	8,000
No. of Deaths	25	37	30	90	100

58. The number of deaths registered in a district with respect to age during a year and the population size in each age group are given below. Calculate the crude death rate of the district for the period.

Age Group (in years)	Below 15	15-25	25-40	40-65	65 and above
No. of Persons	40,000	88,000	90,000	60,800	23,000
No. of Deaths	40	62	100	78	20
