PROJECT WORK

Project Work is a student-centered pedagogy in which students learn about a subject through the experience of solving an open-ended problem. This necessitates to synthesize knowledge from various areas of learning, and critically and creatively apply it to real life situations.

LEARNING OBJECTIVES

The student will be able to

- Design a questionnaire for a given project
- Collect data using questionnaire.
- Compile and tabulate the collected data.
- Statistically analyze the data
- Write a brief report

RU9A1E

Introduction

A mechanical engineer has to spend time in an Industry as an apprentice, a medical doctor with a hospital as a house surgeon, an auditor with an accountant, a budding lawyer with an established senior as a junior to get to know intricacies of the profession in his day to day affairs. *Where is the counterpart of this for a student studying Statistics?* It is in this background, the inclusion of **project work** in the curriculum gains importance. This would help to some extent to bridge the gap between the theory learned in the class room and application.
