Evaluate the Questionnaire

Once a rough draft of the Questionnaire has been designed the researcher is obligated to take a step back and critically evaluate it. This phase may seem redundant, given all the careful thoughts that went into each question. But recall the crucial role played by the questionnaire. At this point in the questionnaire development of the following item should be considered.

- Is the question necessary?
- Is the survey too long?
- Will the question provide the answers to the survey objectives?

Pre-Test

After the questionnaire is prepared, pre-test is to be done. The process collecting information from the related respondent in small number with the framed questionnaire is called *Pre-Test*. Sometimes, the questionnaire is circulated among some competent investigators and they are asked to make suggestions for its improvement. Once this has been done and suggestion incorporated in the final form of the questionnaire is ready for the collection of data.

9.4 FEATURES OF A PROJECT REPORT

Features of a project report.

The general structure of a project report consists of three main divisions.

A. The Preliminary Section:

This includes the title page, the preface, the acknowledgement, the table of contents and the list of tables and figures.

B. The Main Body Or The Text Of The Project :

This contains the introduction to the problem, the review of previous research in a similar field, the details of the procedure, the findings, the analysis of that, and conclusions.

C. The Reference section :

This includes Foot Notes, Bibliography Appendix , Index, etc.

LANGUAGE OF THE REPORT:

Report should be written in a simple language. It should be clear, precise and simple in style, and brief. It should be written in third person or passive voice. Spelling mistakes, colloquial form of presentation should be avoided. Spelling of non-English words, if used, should be kept uniform throughout.
