Objectives:

1. *To describe the demographic features of the respondents*
2. *To find the prevalence of obesity among the population.*
3. *To know whether sex and diet in take is associated with obesity.*
4. *To test whether the suggested linear model between height and weight is good fit to the given data.*
5. *To test whether the sex and diet intake has influence on average weight*

Hypothess:

1. *Obesity doesn't depend on sex*
2. *Diet intake is not associated with obesity.*
3. *The linear model is good fit for the data between height and weight*
4. *The average weight of male and the average height female do not differ due to sex.*
5. *Different diet intake do not affect the average height.*

Stage 3: Project work planning

Planning for Data Collection

(i). Source : a). Survey ☑ *b). Experiment* ☐ *c). Observational study* ☐

(ii) Type of data: a). Primary data ☑ *b). Secondary data* ☐

(iii) Population or target group: _____

(iv) Coverage : _____

a). Census survey ☐ *b). Sample survey* ☑

If you go for a sample survey, answer the following:

(v) Sampling frame : a). available ☑ *b). Not available* ☐

(vi) Sample size determination: _____

(vii) Number of contacts: a). Only one time (Cross section study). ☑

b). Two times (before and after the intervention/ treatment) ☐

c). Several times (Longitudinal study) ☐

(viii) Sampling to be used? _____

(ix) Is it appropriate or whether will it give representative population ?

1. Yes ☑ *2. No* ☐

(x) The measuring instruments you intend to use? _____

(xi) In case of, questionnaire, Whether " Pre test " is conducted

1. Yes ☑ *2. No* ☐

(xii) Are they reliable and valid? 1. Yes ☐ *2. No* ☑
