Template for Statistical Tool Selection and Analysis for formula type

Research Objective:

Template for selecting suitable test for testing of hypothesis and Analysis

Identify the variables involved:

Type of measurement scales:

Number of Variables:

==========

Selection of Appropriate Statistical Tool:

==========

Statistical calculation:

Findings:

Conclusion:

Research Hypothesis:

1. Study design (Tick appropriate)

   One sample ☐ Two independent sample ☐

   More than two independent sample ☐ Related sample (before – after) ☐

   Repeated measure more tha 2 times (Longitudinal) ☐

2. Identify the appropriate parameter to be used:

   Mean ☐ Proportion ☐ Variance ☐ Median ☐

3. Number of samples considered simultaneously:

   One ☐ Two ☐ More than two ☐

4. Sample size: Greater than 30 ($n \geq 30$) ☐ Less than 30 ($n \leq 29$) ☐

5. Data set follows: Normal Distribution ☐ Non Normal ☐

==========

Suitable statistical test: Parametric ☐ Non Parametric ☐

Name of the test: _____
