TEST PROCEDURE

Test Procedure:

Null Hypothesis H_0:

Alternative Hypothesis H_1:

Level of Significance α:

Test Statistic:

Calculation of calculated value using sample data:

Critical value from the table:

Inference:

Statistical Tool Selection based on purpose or aim

S.No.	Purpose / Aim	Stat. Tool
1	Describing or highlighting the variables	Descriptive Statistics
2	Relationship between **variables**. In terms of movements	Correlation Analysis Pearson's Correlation,Correlation with Spearman's Correlation
3	Relationship between **Attributes.**	Chi-square test for independence of attributes
4	Finding ***mathematical relationship*** for future prediction Or **impact of** independent variables on the dependent variable	**Regression Analysis** Simple Regression analysis
5	Hypothesis Testing 1. Assigning a value to the parameter 2. Comparing the efficiency of one group over other groups.	Large sample: Z tests ***Parametric Tests:*** Small Sample: , Single sample t test, Independent Sample t test, Paired Sample t test. ANOVA
6	To study the relative changes with respect to a base period in production, salary, prices etc	Index Numbers
7	In time series data to know the trend and to analyze the seasonal effect	Time series analysis Method of moving averages- method of least squares
8	To calculate the demographic details like birth rates, death rates, expected life time etc	Vital statistics -Mortality table
