```
  example 'failing expectation' do
    u2_concert = Event.new('U2 Concert', 10_000)
    9_900.times { u2_concert.purchase_ticket_for(:a_fan) }

    expect(u2_concert).to be_sold_out
  end
end
```

As with the previous exercise, this snippet uses a matcher, `be_sold_out`, that hasn't been defined. Add that definition now. As you did before, get the match logic correct before moving on to the failure message.

Bonus Points

Now that you have built this matcher using the DSL, reimplement it as a matcher class.
