Spec type	Use for…	What it provides	Notes
:controller	• Testing controllers in isolation	• Request helpers like get :index, post :create • Controller matchers; see *Rails Matchers Cheat Sheet*, on page 304 • controller to define an anonymous controller[5] • route to use a different route set • bypass_rescue to prevent converting errors to 500 responses • Named route helpers of the form some_route_path	• Bypasses Rack middleware • By design, does not render views by default; call render_views if you need this behavior[6]
:view	• Testing the HTML contents of your views	• assign to make instance variables available	
:helper	• Testing view helper modules in app/helpers	• assign to make instance variables available • helper.some_method to call methods from the helper module you're testing	
:mailer	• Testing Rails mailers	• Named route helpers of the form some_route_path	
:routing	• Checking that URLs route to specific controller actions	• Routing matchers; see *Rails Matchers Cheat Sheet*, on page 304 • Named route helpers of the form some_route_path	
:job	• Testing background jobs	• Database transactions and model fixtures (available for all spec types, but more relevant here)
