Yielding

To use the yield matchers, your expect block must receive an argument (a "yield probe") and pass it on to the method-under-test using Ruby's &block syntax:

```
expect { |probe| obj.some_method(&probe) }.to yield_control
```

Matcher	Passes if method called in block yields…	Available aliases
yield_control	…one or more times	yield_control.at_least(:once) a_block_yielding_control
yield_control.once	…once	a_block_yielding_control.once
yield_control.twice	…twice	a_block_yielding_control.twice
yield_control.thrice	…thrice	a_block_yielding_control.thrice
yield_control .exactly(n).times	…n times	a_block_yielding_control .exactly(n).times
yield_control .at_least(n).times	…at least n times	a_block_yielding_control .at_least(n).times
yield_control .at_most(n).times	…at most n times	a_block_yielding_control .at_most(n).times
yield_with_args(x, y)	…once with arguments that match x and y	a_block_yielding_with_args(x, y)
yield_with_no_args	…once with no arguments	a_block_yielding_with_args(x, y)
yield_successive_args([a, b], [c, d])	…once with arguments that match a and b and once with arguments that match c and d	a_block_yielding_successive_args([a, b], [c, d])
