

A screenshot of the Sidekiq Web UI's Retries page. It shows a single job's class and error message, along with an indicator of when the job will be retried.

The mock error catcher has a Web UI you can examine to view the notifications it has received. You can see it at http://localhost:3001, and it should look like the shot below. If you see a notification here, a real error catcher would've notified you.

A screenshot of the mock error catcher that shows a table with entries for all the retry attempts. Each entry shows a timestamp, the exception class name, and the exception's message.

Now, undo the syntax error:

snapshots/2-2/sidekiq-book/app/services/order_creator.rb

```
  def complete_order(order)
»   # removed forced error
    payments_response = charge(order)
    if payments_response.success?
```
