

A flowchart showing the CompleteOrderJob queuing the job SendOrderNotificationEmailJob, which then queues the job RequestOrderFulfillmentJob. If CompleteOrderJob results in a decline, it skips the other two jobs.

To make this change, you'll need two new jobs that will call two new methods on OrderCreator. The first job is SendOrderNotificationEmailJob, which goes in app/jobs/send_order_notification_email_job.rb and calls send_notification_email.

snapshots/3-1/sidekiq-book/app/jobs/send_order_notification_email_job.rb

```
class SendOrderNotificationEmailJob
  include Sidekiq::Job
```
