system could fall over as you could lose the ability to both queue and process jobs.

Observe the normal amount of space Redis uses and alert yourself if it goes above it for too long. Knowing in advance you may have trouble can make it a lot easier to get through a period of increased activity.

It’s one thing to set up monitoring and alerting, but it’s much more difficult to address performance problems you find. Let’s review two options provided by Sidekiq: multiple queues and concurrency.
