regulation? How can we do this in a responsible way? Again, these are questions at this point, but I am sure we will find the answers.

Let me conclude. Technology, with its capacity to reduce transaction costs, is key to enabling the large volume low-ticket transaction that is at the centre of financial inclusion. By collecting and processing large volumes of data easily, technology can also improve the quality of financial decision making. When products have network effects, technology can ensure not just interoperability, key to obtaining the benefits of networking, but also security, key to maintaining the confidence of people and preventing them from withdrawing from the formal financial system once again. I sincerely hope the successful ICT industry will partner with the finance industry to revolutionize financial inclusion in this country.
