that came through would be turned into Articles of Agreement by a drafting committee headed by Louis Rasminsky, an official of the Canadian Treasury.

Aware of Keynes's failing stamina and his need to rest, White had made him Chairman of the Bank to neutralize him. The idea was to keep him busy with the Bank so that he would have little energy or time to devote to the Fund. The strategy worked. Keynes who was also head of the British delegation and unofficial leader of the Commonwealth group had far too much on his plate. This was also reflected in the extreme haste with which deliberations of Commission II which dealt with the Bank were carried out. Keynes made no secret of the fact that he was forcing his views on the other delegates. Morgenthau at one stage went to Keynes to 'ask him would he please go slow and talk louder and have his papers in better arrangement.'[11]1Dean Acheson who was America's representative, told Morgenthau that Keynes was rushing it 'in a perfectly impossible and outrageous way… He knows this thing inside out so that when anybody says Section 15-C he knows what it is. Nobody else in the room knows. So before you have an opportunity to turn to Section 15-C and see what he is talking about, he says, "I hear no objection to that", and it is passed.'[12] Keynes was exhausted and wanted to get away as soon as possible. He also knew that with too many discussions nothing would ever get done.

Keynes was also puzzled by White's obsession with the Soviet Union and his hostility to Britain. He would never have dreamt that White and his friends were passing government secrets to the Soviets and helping them to spy on him (Keynes) and the other delegates. Among the many assistants White brought with him, were a dozen or more employees from the Monetary Research Division of the Treasury, who were members of the 'Silvermaster ring' of the KGB.[13]

In the end, as Skidelsky put it, Keynes gave the Bretton Woods Agreement its distinction, not its substance. 'The Agreement reflected the views of the American, not the British Treasury; of White, not Keynes. The British contribution tended, finally, towards the negotiations of derogations, postponements, and escape clauses. The Agreement was shaped not by Keynes's *General Theory* but by the US desire for an updated gold standard as a means of liberalizing trade. If there was an underlying ideology, it was
