politics, and in the process they try to distort his memory and his legacy'.[10] This is why a mere apology not followed by a remedial behavioural change back in India is entirely inconsequential and of no use to anyone. When others such as Hardeep Singh have asked 'shouldn't memorialisation and education about the darker aspects of colonialism (along with the good) take precedent?',[11] what they are all asking for is a 'historical adjustment' of a past misrepresentation of history. In this sense, a sincere apology may well work because it can work to perform three functions, namely, that it will recognize the errors of the past, it will express regret over such errors and it will make it clear that the same error will not be repeated in the future. In this way, it avoids the misapprehension in the future of continuing to treat racially and religiously varied minorities differently. It helps to defeat the 'legacy of racism' that still endures from the past to this day. This is why Anita Anand explains that '[t]he way history was and continues to be taught in Britain does a disservice to all . . .' and that 'the ignorance has been shown into sharp relief by the centenary anniversary of the Jallianwala Bagh Massacre', which was to be commemorated in 2019. She is in no doubt that '[a]n honest appraisal of colonial history will, however, make all the difference to my children and theirs'.[12] The young Indian historian, Manu S. Pillai, put it rather well when writing about the Jallianwala Bagh Massacre. He argued that 'a sincere expression of remorse would not only offer closure for relatives of those who suffered Dyer's bullets, but could encapsulate all other acts of injustice sponsored by the Raj'.[13] Could the same be said in relation to Bhagat Singh's hanging? Ultimately, the deliberate repression of history's most significant events, and what questions they raise today about human existence, is what needs to be overcome.

For those who argue that the Empire had some upsides as well as downsides, Prof. Priya Satia, in her enticingly titled *Time's Monsters*, has recently disabused them of this notion by explaining, 'The problem with weighing pros and cons is that it presumes there is a point at which the story is over, the accounts are closed, and we can actually tot up the balance.' Such an argument 'also depends on the premise that empire was a
