5.6.5 Property Inspector

The Property Inspector appears on the right side of your Flash workspace by default. It is grouped with the Library panel. It displays properties and options for objects selected on the Stage, and also allows you to modify them. The object can be text, an image, a line, or any other shape.

Like any other panel, the Property Inspector panel can also be viewed or hidden by using Window menu.

5.7 Flash applications

With Flash, you can integrate text, images, video, and sound to your projects, and create animations and application interfaces. Any content you generate with Flash is called an application.

Documents, Movies, and Applications

When you work in Flash, you are creating a document. As you save your work as an .fla file, you are saving the document. This is consistent with other Adobe products, such as Photoshop, that use the word document to refer to work created in that program. In addition, because Flash uses a movie metaphor with a Stage, Timeline, frames, animations, and so on, the work done in Flash is often referred to as a movie. So, the phrase **Flash document** and the phrase **Flash movie** are synonymous.

Movies can be as small and simple as a ball bouncing across the screen or as complex as a full-length interactive adventure game.

Products such as games, educational software, online advertisements and product demonstrations are referred to as applications. An Application usually contains multiple Flash documents or movies that are linked.

5.8 Drawing in Flash

Adobe Flash Professional CS6 has many powerful tools to help you create vector-based shapes, paths, colors and patterns. Although Flash can work with pixel or bitmap images, the drawing tools in Flash create vector-based artwork.
