6.4.8 Command Window

The command window is normally located at the bottom of the application window, just above the status bar. This window normally contains three lines of text and the first two lines list the immediate command history. The bottom line is the command line. If you do not see the command window, press Ctrl + 9 to make it appear.

You can enter a command manually at the command line. You can type at the cursor position on the command line, that is, the Command: prompt.

If you just type the first letter of a command, it will list all the commands starting with that letter. Note: Always press ENTER after you type values on the command line.

You can drag this window to a different place on the screen and resize it.

Fig. 6.32. Command Window

When you enter a command, AutoCAD doesn't care if you use UPPERCASE or lowercase characters, or a combination of either. If you make a mistake typing on the command line, press the BACKSPACE key to correct.

You can press ESC at any time. If you press ESC while an operation is in progress, it terminates the command.

To repeat the command you previously entered in AutoCAD, press ENTER (or the spacebar) at the 'Command:' prompt. As an alternative, right-click to display the cursor menu, and then select the Repeat option.

Recent Input

AutoCAD remembers the last twenty commands and options you enter at the 'Command:' prompt, or select from a menu or toolbar. Autodesk calls this "Recent Input."

If you prefer to see a list of the command history, right-click, and then select Recent Input from the shortcut menu. AutoCAD lists the previous commands and/or coordinate inputs in a submenu.
