Australia with an average density of population of **2 persons per sq.km** is one of the most sparsely populated countries of the world. However, inhabitants of these areas have high standard of living. **The reasons for low density of population are:**

a. Bad and unfavourable environment conditions for human settlement.

b. Lack of economic activities.

c. Lack of transport and communication.

d. Government policy.

Terms related population

1. **Population:** A group of individuals of the same species occupying a particular geographic area.
2. **People:** The members of a particular nation, community, or ethnic group.
3. **Crude Birth rate (Natality Rate):** Number of live births per thousand people in a year.
4. **Crude Death Rate (Mortality Rate):** Number of deaths per thousand people in a year.
5. **Net Migration Rate:** the formula for net migration rate is simple:

   $N = 1000 \times (I - E) / P$

   N= net migration rate

   E= number of people emigrating out of the country

   I= number of people immigrating into the country

   P= the estimated mid-year population
6. **Fertility Rate:** is the number of live births expected per 1000 women in their life times in a specified geographic area and for a specific point in time, usually a calendar year. **Niger** has **the highest fertility rate of 6.49** while **Singapore** has the **lowest fertility rate of 0.83.** Can you guess why there is variation between these countries?
7. **Dependency ratio:**

   Number of dependents in a population divided by the number of working age people. It's a calculation which groups those aged under 15 with those over 65 years as the 'dependants' and classifying those aged 15-64 years as 'the working-age population'.
8. **Growth Rate:** = CBR – CDR +/- Net Migration Rate/ 1000

   South Sudan has the highest population growth rate of 3.83% in 2017.
9. **Rate of Natural Increase (RNI)** = CBR-CDR (No Migration)

   CBR>CDR = ↑ population

   RNI usually expressed as %
   e.g., 2% = 2/100 = 20/1000

   RNI ≠ population growth if migration significant
10. **Adult Literacy Rate:** The Adult literacy index (ALI) is a statistical measure used to determine how many adults can read and write in a certain area or nation. Adult literacy is one of the factors in measuring the Human Development Index (HDI) of each nation, along with life expectancy, education, and standard of living. Burkina faso has the lowest literacy rate of 21.8% (2015). How does literacy rate affect the standard of living of a country?
11. **Life expectancy rate:** Life expectancy equals the average number of years a person born in a given country is expected to live. As of 2015, the country with the highest life expectancy is Monaco at 89.52 years; the country with the lowest is Chad at 49.81 years.
