

Step 7: Combine with Eye Height

To find the height of our object, we bring this x value back to the original drawing. By labeling it, we can see that the height of the object, h, is equal to the x value we just found plus the eye-height we measured earlier:

h = x + (eye-height)
In the example:
h = 10.92m + 1.64m
h = 12.56m
