

Prismatic Compass

Use of Prismatic Compass

Prismatic compass measures the horizontal angle with reference to the magnetic north- line. The bearing thus obtained is a magnetic bearing which is measured as a horizontal angular distance of any line of the traverse from magnetic north in clock wise direction.

The corners of plot or building, bends of a road can be measured directly by prismatic compass. The bends of a meandering canal, if divided into segments, can be favourably determined by a prismatic compass.

Exercise

Observe the prismatic compass. Note the name and function of each and every part.
