Formula:

$$\bar{X} = A + \frac{\sum fd}{N} \times i$$

$$\bar{X} = 25 + \frac{50}{50} \times 10$$

$$\bar{X} = 25 + 10$$

$$\bar{X} = 35$$

Median:

Median is the middle value of a series arranged in any order – ascending or descending. Median divides the series in to two equal parts.

Calculation of Median

Example 13.3

The following are the monthly minimum temperature of Chennai District. Find the median.

Chennai

Minimum Temperature ° C					
Jan	21.2	May	28	Sep	25.6
Feb	22.2	June	27.5	Oct	24.6
Mar	24.2	July	26.4	Nov	23.1
April	26.6	Aug	25.9	Dec	21.9

Solution:

Step 1:

Arrange the data in Ascending Order

1	2	3	4	5	6	7	8	9	10	11	12
21.2	21.9	22.2	23.1	24.2	24.6	25.6	25.9	26.4	26.6	27.5	28

Step 2:

Formula

$$M = \text{Value of the } \left(\frac{N+1}{2}\right)^{th} \text{ item}$$

$$M = \text{Value of the } \left(\frac{12+1}{2}\right)^{th} \text{ item}$$

$$M = \text{Value of the } \left(\frac{13}{2}\right)^{th} \text{ item}$$

$$M = \text{Value of the } 6.5^{th} \text{ item}$$

$$M = \frac{\text{Size of } 6^{th} \text{ item + size of } 7^{th} \text{ item}}{2}$$

$$M = \frac{24.6 + 25.6}{2}$$

Answer: M = 25.1
