- Using the renewable source of energy as an alternative to non- renewable resources.
- Developing the usage methods which minimize the wastages.
- Propagating the environmental ill effects caused by various products.
- Choosing the products with less packaging.

GLOSSARY

1. **Mineralogy:** The study of minerals.
2. **Ubiquitous resource:** resources which exist everywhere
3. **Alloy:** a metal made by combining two or more metallic elements, especially to give greater strength or resistance to corrosion.
4. **Lodes**: a vein of metal ore in the earth.
5. **Exhaustible**: Resources of which a finite quantity is in existence.
6. **Mineraloids:** A rock with an aggregate of one or more minerals.
7. **Nuclear power:** The use of nuclear reactions that release nuclear energy to generate heat, produce electricity in a nuclear power plant.
8. **Silicon material**: Silicon is a chemical element with symbol Si and atomic number 14. It is a hard and brittle crystalline solid with a blue-grey metallic lustre.
9. **Odorant**: a substance used to give a particular odour to a product.
10. **Corrosive**: substance that will destroy other substances with which it comes into contact by means of a chemical reaction.
